# ACOUSTIC SENSE WOOD: WALL DESIGN WITH SOUND-INSULATING EFFECT!

A natural and functional design element for your home: characterful solid wood and high-quality felt form an attractive wall panel that also significantly improves the acoustics of the room. Especially in modern living spaces, where textiles like curtains or carpets are used sparingly, sound-insulating acoustic panels create a noticeably more pleasant atmosphere – including less noise and improved intelligibility of speech. The felt back wall in vegan felt absorbs up to 95% of sound from the room, depending on the installation type. Partial installation on the wall is enough for effective sound insulation.

The high-quality solid wood slats are glued onto the felt across the entire surface and are easy to clean, thanks to their matt lacquered finish. Deep brushing brings out the natural beauty and texture of the wood to their best advantage.

**Room height length of 2 600 mm**

**Practical width of 330 mm**

**Simple cleaning and care,  
thanks to matt lacquered finish**

**Simple installation: glue or screw**

# ACOUSTIC SENSE IIIIII WOOD

## Highest absorber class possible:

On wooden battens with 40 mm insulation:  
On wooden battens:  
Glued to the wall:

Absorber class A – 95% sound absorption  
Absorber class C – 65% sound absorption  
Absorber class D – 30% sound absorption
